SUMMARY

Cybersecurity MSc student (Arden University, Berlin) and Computer Science graduate with hands-on software-testing experience. Strengths in API and application testing, vulnerability and risk fundamentals, and classical cryptography implemented from scratch. Seeking an entry-level or working-student role in IT security where testing rigour and a security mindset add value. Early in the security field and eager to learn on the job.

SKILLS

Security: Vulnerability assessment, risk mitigation, classical cryptography (Affine/Playfair/Vigenère), secure-systems fundamentals, security & API testing

Testing / QA: Postman (API testing), WebDriverIO, Jasmine, Node.js, Jira, manual & automation testing

Programming: JavaScript (proficient), Python (intermediate), C (basic)

AI / ML: ML model testing & validation, image recognition and classification

EDUCATION

MSc Cybersecurity — Arden University, Berlin In progress, expected 2027
Focus areas: vulnerability assessment, risk mitigation, secure and resilient systems

B.Tech, Computer Science and Engineering 2019 - 2023
Sree Narayana Gurukulam College of Engineering, Kerala, India — CGPA 7.14

EXPERIENCE

QA Intern / Software Tester — Testing Mavens Software Pvt Ltd Jul 2023 - Sep 2023
Kochi, India

- Built and maintained automated test scripts with WebDriverIO (Jasmine framework, Node.js), improving reusability and reducing repetitive manual testing.
- Performed API testing in Postman, writing test scripts to validate API responses and surface defects before release.
- Ran performance and load testing on a login flow using JMeter.
- Executed manual and cross-platform functional testing; logged and tracked defects in Jira with clear reproduction steps.
- Worked in an agile team through daily stand-ups, sprint planning, and retrospectives.
- Validated application reliability and API behaviour — testing rigour that transfers directly to application-security testing.

AI / ML Support Engineer — Pattern AI Labs (Agrima Tech) Jan 2024 - Nov 2024
Kochi, India — Machine Learning Operations team

- Supported development, deployment, testing, and validation of machine-learning models.
- Built and corrected image-recognition and classification datasets for food products, improving data quality by finding and fixing misclassifications.
- Collaborated across teams to integrate ML solutions and mentored new team members on classification methods.

PROJECTS

security-in-computing — Implemented the Affine, Playfair, and Vigenère classical ciphers from scratch in Python for a foundations-of-security project. github.com/Sreerag-k/security-in-computing

- SMS Spam Classification and Movie Review Analyzer — machine-learning projects (undergraduate).
